RAM MOHAN

Senior Android Engineer

ram10.rm6@gmail.com | +91 9497891704 | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Senior Android Engineer with 4+ years building high-scale FinTech and hybrid mobile applications, including a banking platform serving 500K+ active users. Specializes in Kotlin, Jetpack Compose, and Clean Architecture, with a track record of cutting app launch time by 63%, reducing state-management bugs by 28%, and resolving 50+ memory leaks in production. Skilled at bridging native Android, iOS (Swift), and Flutter to ship cross-platform features without full rewrites, with hands-on experience managing releases through TestFlight to App Store, and at mentoring engineers through Agile delivery cycles. Proven track record working fully remote across distributed, international teams spanning Taiwan, the UK, Germany, Japan, and France.

CORE COMPETENCIES

Languages: Kotlin, Java, Dart, Swift

Android SDK: Android SDK, Multi-module Architecture

UI Frameworks: Jetpack Compose, Material 3, XML Layouts, Custom Views, Figma-to-Code

Architecture: MVVM, MVI (Redux-style), Clean Architecture, Multi-module Project Structure

Reactive Programming: Coroutines, Kotlin Flow, StateFlow, LiveData

Dependency Injection: Hilt, Dagger 2

Networking & Data: Retrofit, OkHttp, REST APIs, GraphQL, Room DB, Firebase, Paging 3

Security & Compliance: Android Keystore, Biometrics, ECDSA

Testing & Tools: Android Studio, JUnit, Espresso, MockK, LeakCanary, Android Profiler, AWS

Version Control: Git, Bitbucket, GitLab

Cross-Platform: Flutter (hybrid integration), MethodChannel bridging, iOS Development (Swift, Xcode, TestFlight, App Store Deployment)

CI/CD: Jenkins, GitLab CI/CD

AI-Assisted Development: Cursor, Codex

PROFESSIONAL EXPERIENCE

Senior Android Engineer – Simplogics Solutions Pvt Ltd | Nov 2021 – Present

Line Bank – *Large-Scale Enterprise FinTech, Taiwan (500K+ Users, 50+ Engineers)*

- **Boosted app launch performance by 63%** through strategic coroutine restructuring and elimination of 50+ memory leaks.
- **Reduced state-management bugs by 28%** by engineering a Redux-inspired ViewModel framework using StateFlow, standardizing state across 50+ screens.
- **Cut UI boilerplate by 25%** by spearheading the team's migration to Jetpack Compose, increasing developer velocity.
- **Delivered core banking modules** — P2P transfers, QR payments, and secure beneficiary management — serving 500K+ active users in a cross-functional team of 50+ engineers.
- **Resolved 54 UAT and production issues** across transaction modules, supporting Video KYC SDK integration, OCR pipelines, and secure transaction-signing flows.
- **Implemented banking-grade security** using Android Keystore, ECDSA cryptography, and biometric authentication to meet strict compliance standards.

- **Eliminated legacy technical debt** by refactoring core modules in close collaboration with backend, QA, and security teams across Agile sprints.

Swimple – *Hybrid E-Commerce & Booking Platform, UK*

- **Reduced build failures by 43%** by stabilizing CI/CD pipelines and resolving complex multi-module Gradle dependency conflicts.
- **Enabled incremental feature rollout** by architecting a hybrid mobile environment embedding Flutter modules within native Android, avoiding a full app rewrite.
- **Engineered a secure Flutter-to-Native bridge** using MethodChannel to manage secure WebView sessions for retail checkout and payment redirections.
- **Diagnosed and resolved cross-platform defects**, including Flutter black-screen issues, payment crashes, and state desynchronization bugs.
- **Developed and shipped native iOS features in Swift**, fixing iOS-side bugs alongside Android and Flutter work, and managed releases end-to-end through TestFlight beta distribution to App Store submission.
- **Took on informal technical lead responsibilities** on the project, coordinating cross-platform priorities and accelerating delivery using AI-assisted development tools such as Cursor and Codex.

Near2You – *Social Platform*

- **Built real-time, location-aware features** by integrating Google Maps API, Firebase authentication, and Room database for local storage and data sync.
- **Designed a reusable Compose UI system** using Material Design with Jetpack Compose interoperability for smooth navigation.
- **Mentored junior Android developers** through architecture discussions and code reviews while implementing media upload workflows.

Event App – *Municipal Platform, Germany*

- **Increased user engagement by 22%** by integrating real-time WebSocket communication, WorkManager background sync, and calendar/notification features.
- **Reduced average screen load time by 31%** while ensuring WCAG accessibility compliance via TalkBack support and content descriptions.
- **Delivered as sole Android engineer**, acting as lead developer for the full-lifecycle launch of a municipal news and event platform on schedule.

Cariteko – *Car Rental Platform, Japan*

- **Built booking and payment workflows** integrated with Google Maps SDK and real-time vehicle tracking.
- **Improved application stability** by using Android Profiler and memory optimization to resolve crash-prone flows.

AGO Breast Cancer Recommendations – *HealthTech, France*

- **Reduced production defects by 34%** over two release cycles by leading weekly code reviews to improve code quality.
- **Developed a modular WebView-based application** rendering HTML medical content with offline access, notes, and favorites to support frequent guideline updates.
