Ram Mohan

Senior Android Engineer: Secure, High-Performance Kotlin Apps

Nearly 5 years building secure, high-performance Kotlin and Jetpack Compose apps for banking, e-commerce, HealthTech and connected cars. Specializes in startup performance, MVI architecture and secure payments.

Skills

Languages: Kotlin | Java | Dart | Swift
Android: Android SDK | Jetpack Compose | ViewModel | LiveData | Navigation | Room | WorkManager | Services | Broadcast Receivers | Notifications | Material Design | Android Auto | Android NDK | Android Studio
iOS: SwiftUI | Xcode | TestFlight
Architecture & Concurrency: MVVM | MVI | Clean Architecture | Multi-module | Hilt | Dagger 2 | Coroutines | Flow
Cross-Platform: Flutter | Bloc | Provider | Riverpod | MethodChannel
Networking & Data: RESTful APIs | GraphQL | WebSockets | Retrofit | OkHttp | SQLite | PostgreSQL | Firebase
Quality & Delivery: Android Studio | Gradle | Play Console / App Signing | JUnit | Espresso | Instrumentation Tests | MockK | Crashlytics | ANR Debugging | Git | GitLab CI/CD | Jenkins | AWS | AI-assisted Development
Security: Android Keystore | Biometric Authentication | ECDSA Cryptography
Leadership: Tech Leadership | Mentoring | Code Reviews | Agile | Jira | Sprint Planning | Cross-Functional Teams

Work Experience

Simplogics Solutions Pvt Ltd, Trivandrum, India | Senior Android Engineer | 11/2021 - Present
Scope: Owned design, RESTful API integration and release of 6 client apps for remote teams in 5 countries.

- **App launch performance:** Cut app launch time by 63% for Line Bank (500K+ active users) by restructuring Kotlin coroutine usage and eliminating 50+ memory leaks, improving responsiveness and memory efficiency.
- **State architecture:** Reduced state-management bugs by 28% by engineering a Redux-style (MVI) StateFlow ViewModel framework adopted across 50+ screens, following Kotlin best practices and design patterns.
- **Jetpack Compose migration:** Drove the team's move to Jetpack Compose with Material Design components, trimming UI boilerplate by 25% and increasing developer velocity.
- **Secure banking:** Delivered P2P transfer, QR payment and beneficiary-management modules protected by Android Keystore, ECDSA cryptography and biometric authentication to meet banking compliance standards.
- **Testing and stability:** Wrote instrumentation and applied acceptance-driven testing practices using Junit and Espresso ;diagnosed and fixed ANRs and crashes with Firebase Crashlytics, resolving 54 UAT and production issues in transaction modules (Video KYC SDK, OCR).
- **Release management:** Lowered build failures by 43% on Swimple (UK) by stabilizing CI/CD and fixing Gradle dependency conflicts; managed Google Play releases and app signing in Android Studio.
- **Android platform:** Built features on activity/fragment lifecycle, intents, services, broadcast receivers, notifications, runtime permissions and background tasks, using LiveData and Jetpack Navigation.
- **Backend Integrations** — RESTful APIs and backend microservices for Swimple (UK) and Line Bank (Taiwan).
- **Hybrid Flutter architecture:** Embedded a Flutter module (Riverpod, Bloc, Provider) in native Android and iOS host apps through a MethodChannel bridge, enabling incremental rollout without a full rewrite.
- **Device and OS compatibility:** Kept the app compatible across devices, screen sizes and Android OS versions, and fixed 16 KB page-size compatibility by recompiling native libraries with an updated NDK.
- **Connected car:** Implemented Android Auto (Android for Cars) support for real-time parking in Cariteko (Japan), plus booking, payment and Google Maps vehicle-tracking integrations.
- **User engagement:** Raised engagement 22% on a German civic app as sole Android engineer by adding WebSocket updates and WorkManager sync; cut screen load time 31% while meeting WCAG.
- **Code quality and mentoring:** Led weekly code reviews that decreased production defects 34% over two release cycles (HealthTech, France); mentored junior Android developers.
- **Client Management & Team Leadership:** Stakeholder collaboration, requirements gathering, leading 5 developers on Swimple and 2 mobile developers on Line Bank, and coordinating with external project managers and design/backend teams.
- **Planning and AI-assisted workflow:** Planned sprints, estimated effort and made architectural decisions with Jira in Agile teams; use AI-assisted development to speed up workflows and improve efficiency.

Education

B.Tech in Computer Science Engineering, 2021 | University College of Engineering Trivandrum, India

Personal Projects

Calorie Tracker | Flutter, Dart, Material 3, Android | *Private repository, in development*

- **Offline-first and private:** Building a camera-first app for on-device food recognition with port-based dependency injection; strips GPS and EXIF data, handles camera permissions and the Photo Picker, with widget and unit tests.

Job Finder | Next.js, TypeScript, Python, Supabase (PostgreSQL), GitHub Actions | *Private repository*

- **Job aggregation and automation:** Wrote a scheduled Python crawler for Greenhouse, Lever, Ashby and Adzuna APIs that deduplicates postings, plus a Next.js and Supabase dashboard; GitHub Actions run daily crawls.

Certifications

2024 | Meta Android Developer Professional Certificate
